Concept of Different type of Loops

In computer science, a loop is a programming structure that repeats a sequence of instructions until a specific condition is set.

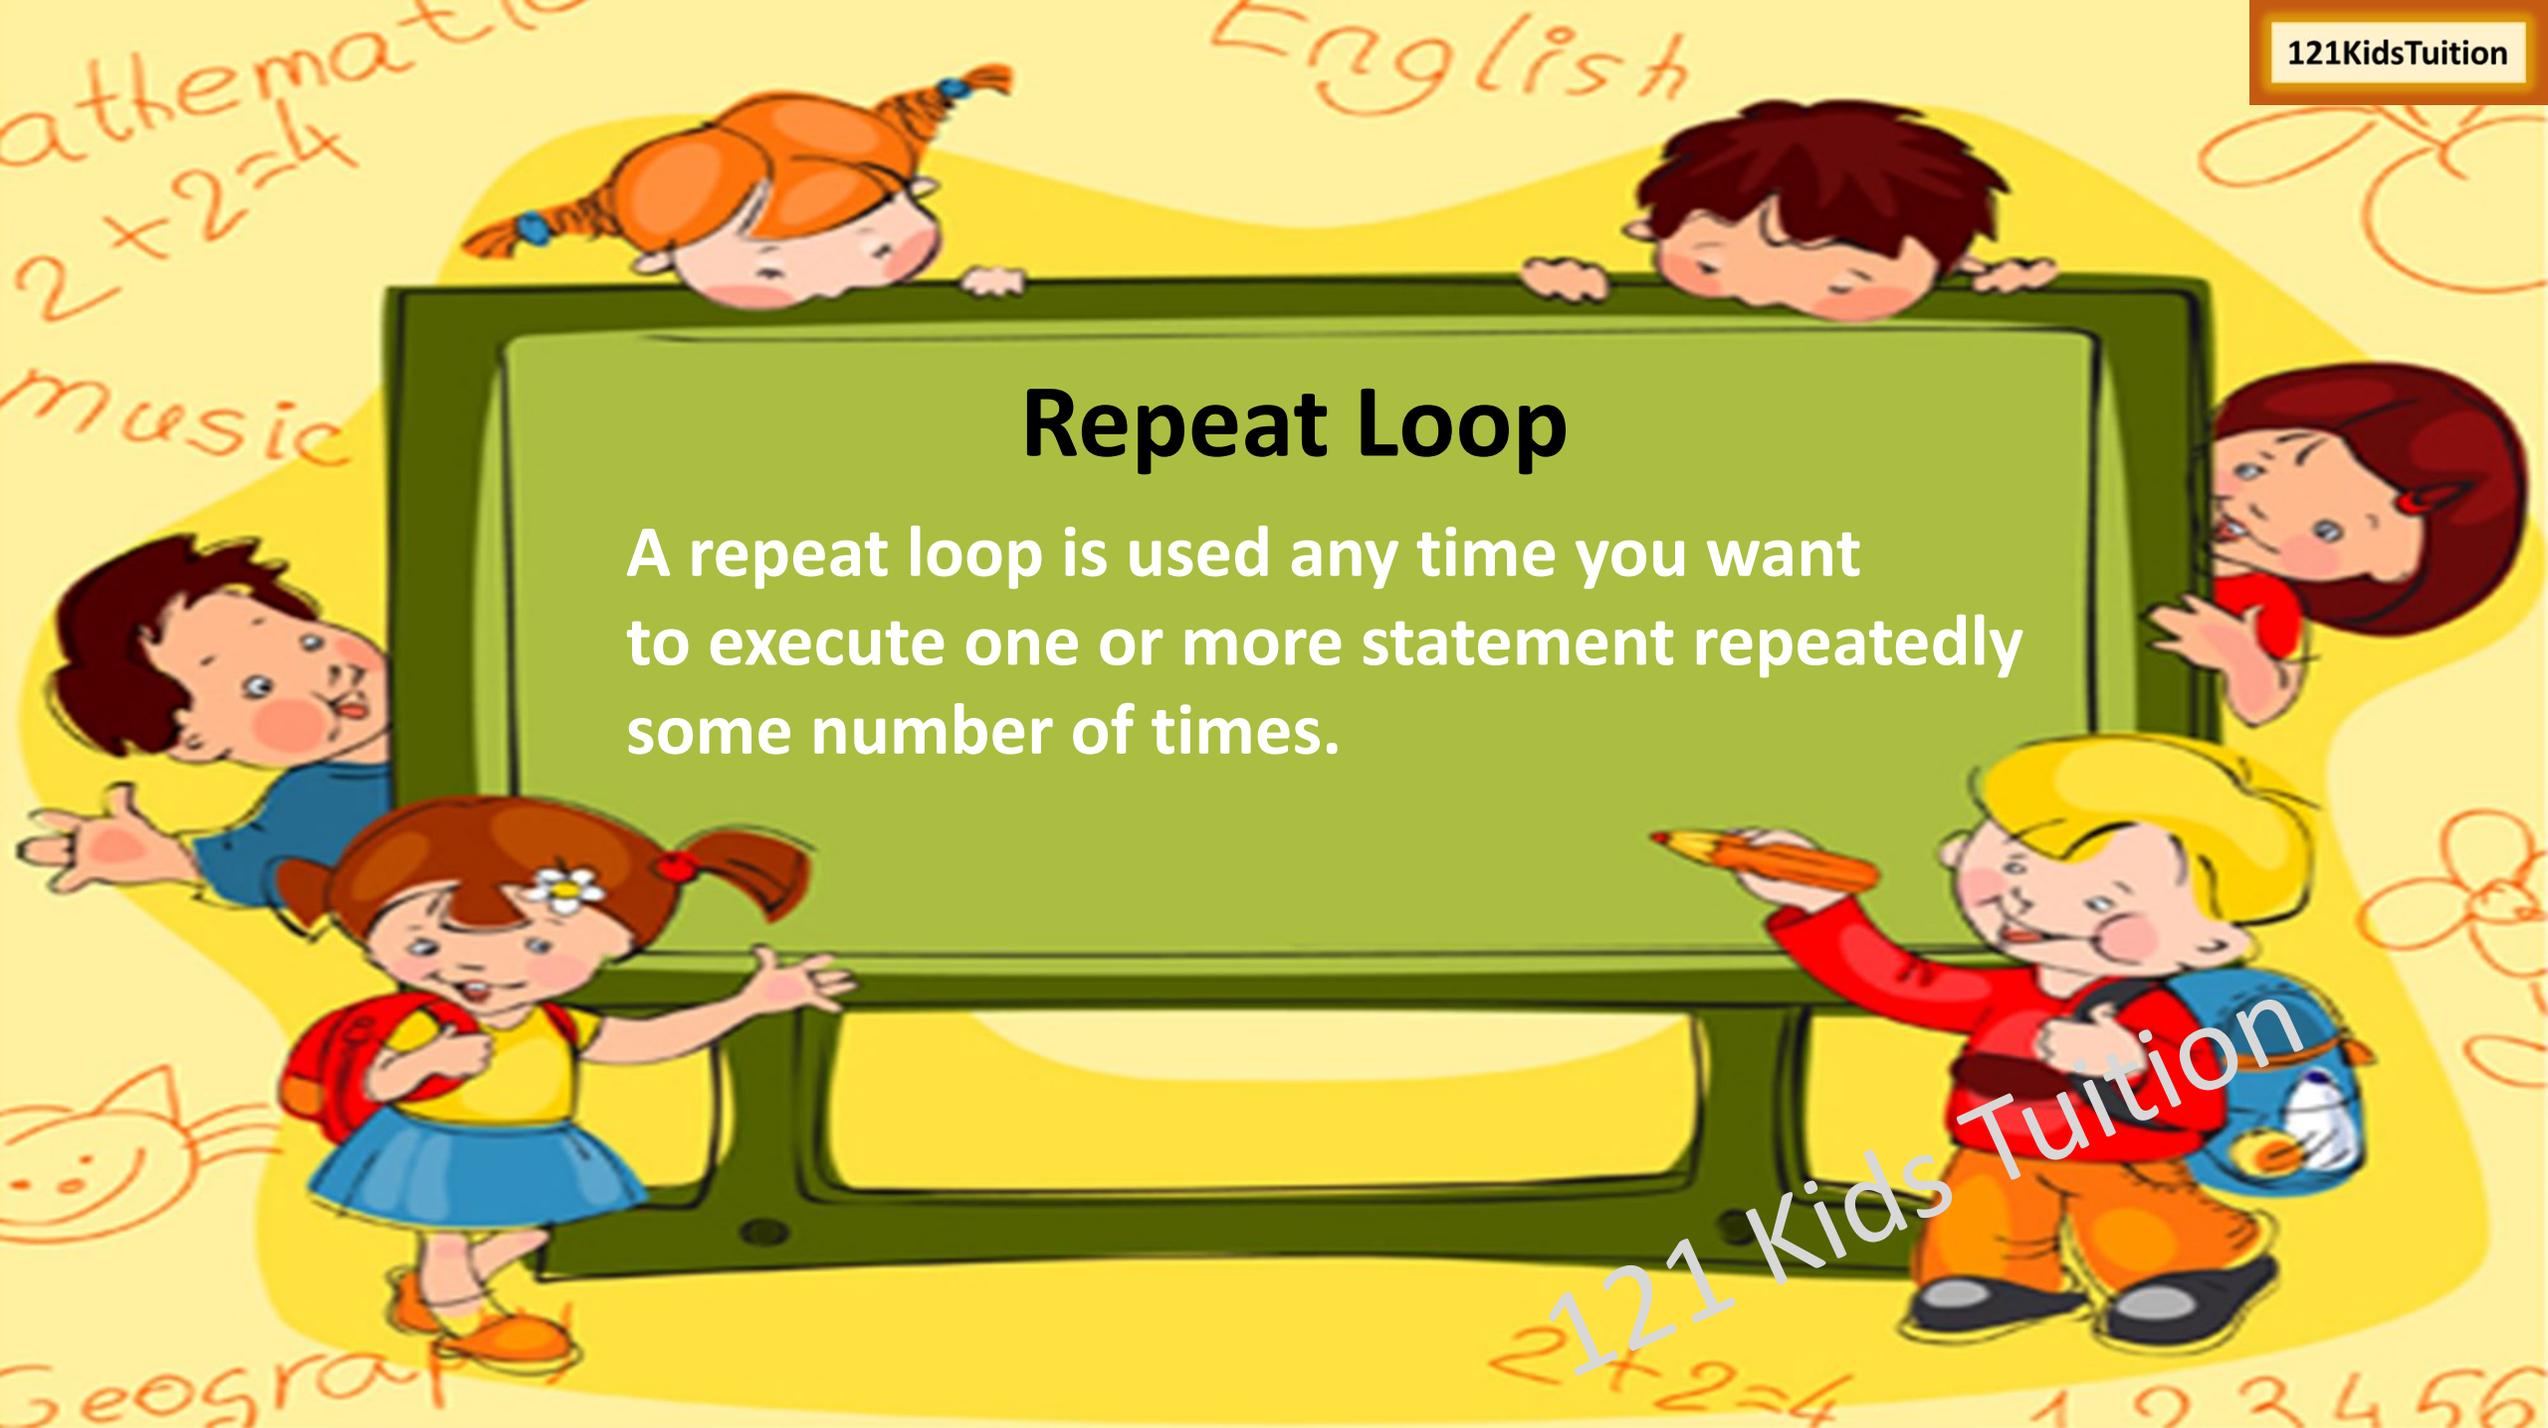

EXPRESSION

121 Kids Tuition

Repeat Loop

A repeat loop is used any time you want to execute one or more statement repeatedly some number of times.

Repeat Loop – Link 1

For Loop

- ❑ A for-loop has two parts : A header specifying the iteration, and a body which is executed once per iteration.
- ❑ For loop are typically used when the number of iterations is known before entering the loop.

Nested Loop – Link 2

<https://studio.code.org/s/course3/lessons/11/levels/2>

Instructions

Now nest this loop inside another loop to draw 10 triangles.
This is called a "nested" loop.

Run
